

**BEM10
ELECTROMAGNET
Holding Power OFF**

This magnet exerts a holding force POWER OFF, of approximately 15 Kgf perpendicular to the steel catch plate with which it is in contact.

The catch plate is connected to the body magnetically without voltage and therefore without power consumption.

The body is released from the catch plate by powering (electrical pulse) to cancel the magnetic field of the magnet.

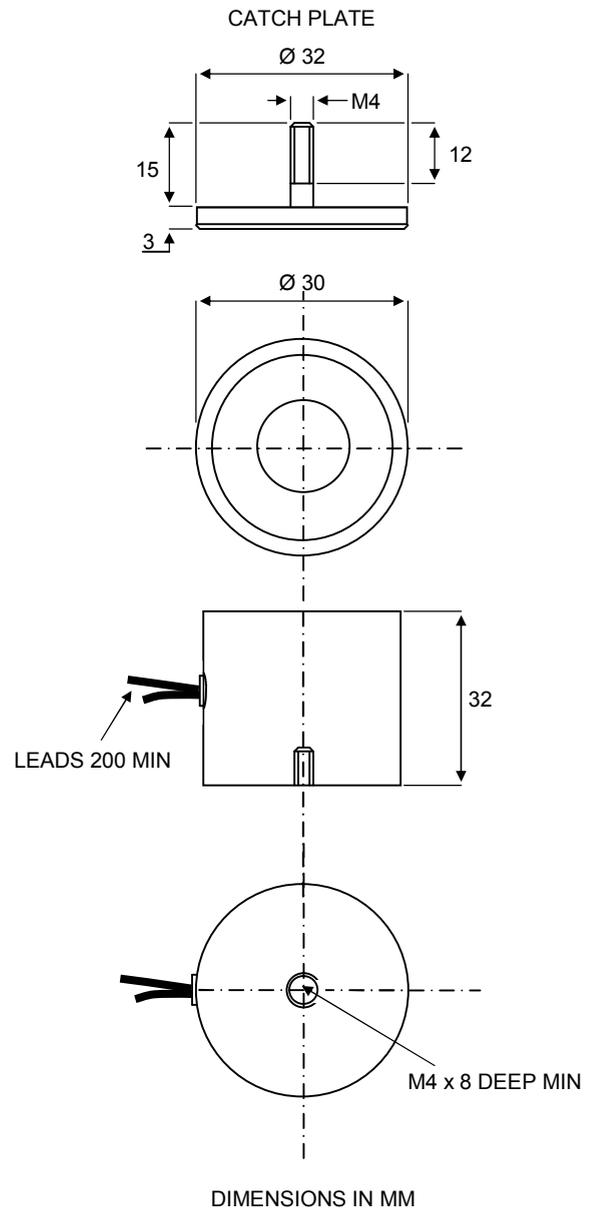

Voltage range: 12V - 110V DC

Power: 3.5W

Supply: DC or full-wave rectified AC

Weight: 500g

Supplied with catch plate

**** Please note: Fixing, plunger coupling, thrust rods and lead length can all be customised ****
We reserve the right to alter or amend designs without prior notice.
